

Release Notes

ACS Web: Release 12.12 **ACS4000 Firmware: Release 2.0.2**

Overview: This release introduces one new global feature for all control panels—Notifications by Schedule—and new REX programmability for existing ACS4000 control panels (with firmware download).

ACS Web Release 12.12

Notifications by Schedule

Email Notifications may now be programmed to be time-dependent. Each notification rule may now have a schedule associated with it so that it will be active only during the indicated time period.

Programmable REX Behavior

Programmable REX behavior; i.e., from the Brivo Web site, the REX input can be configured to either: a) activate the Door relay, or b) not activate the Door relay but still suppress Door Forced alarms for the configured Pass-through Period.

Note: This feature requires an ACS4000 panel with firmware 2.0.2 or higher, or an ACS5000 control panel with firmware Release 5.0.0 or above.

ACS4000 Firmware Release 2.0.2

Firmware release 2.0.2 for the ACS4000 includes the following new features:

- Programmable REX behavior; i.e., from the Brivo Web site, the REX input can be configured to either: a) activate the Door relay, or b) not activate the Door relay but still suppress Door Forced alarms for the configured Pass-through Period.
- Automatic re-establishment of Ethernet networking in the case where the hub, switch or router connected to the ACS4000-E has been disconnected or powered down for a period of time, and then reconnected or powered back on.
