

## Release Notes

### ACS Web: Release 12.14

**Overview:** This release provides Web application changes needed to compensate for changes in the way that the Velocita Wireless radio towers broadcast time to devices on the network. Specifically, on this date, Velocita is changing from the use of local time to the use of UTC time for all network operations..

### ACS Web Release 12.14

---

#### Velocita UTC Time

On Sunday, August 28, beginning at 12:00 noon, one of Brivo's wireless network providers (Velocita Wireless, formerly a part of Cingular Wireless) will be changing the way its radio towers provide timing signals to devices that use the network, including all ACS3000 controls panels.

This change requires that Brivo make updates to its central software, as well as send new schedule data to all ACS3000 control panels. Brivo will be making these changes beginning at 12:00 noon on August 28, in coordination with Velocita Wireless.
