ACS OnSite® Release 1.1.3

Overview: In this release, Brivo offers several improvements for ACS OnSite. Release 1.1.3 marks the launch of increased credential support and card recognition, enhancements to email fields and event reporting.

Brivo is pleased to offer increased support for ACS OnSite, including the following features:

- Support for 75-bit credentials (to support FIPS-201 PIV cards)
- A built-in card decoder that automatically decodes unknown cards using all known format information
- Support added for a longer email address field for notification recipients
- Event reporting has been enhanced to in order to include filters for administrator control events
