Release Notes

ACS WebService® Release 8.1

Overview: Brivo is pleased to offer enhancements to scheduling, along with a firmware upgrade, and badging features, as well as an increase in card capacity per user. This release will also mark the addition of User Photo Comparison feature to our video service, allowing users to view a user's photo with associated video of that user.

Our Video service now provides the option to view video-captured access or failed access events alongside the photo of the user who is associated with the event. This feature offers the ability for verification that the user is, in fact, associated with the corresponding activity.

WebService, with the new 5.0.11 firmware upgrade, now supports increased schedule blocks per day, up to 32 time periods from 4 periods. Additionally, users may now set schedule blocks down to one-minute increments.

This release also offers the ability to add multiple cards per user, as well as barcodes to badging templates.
