

Brivo DataSync

Creating Solutions Through Integration

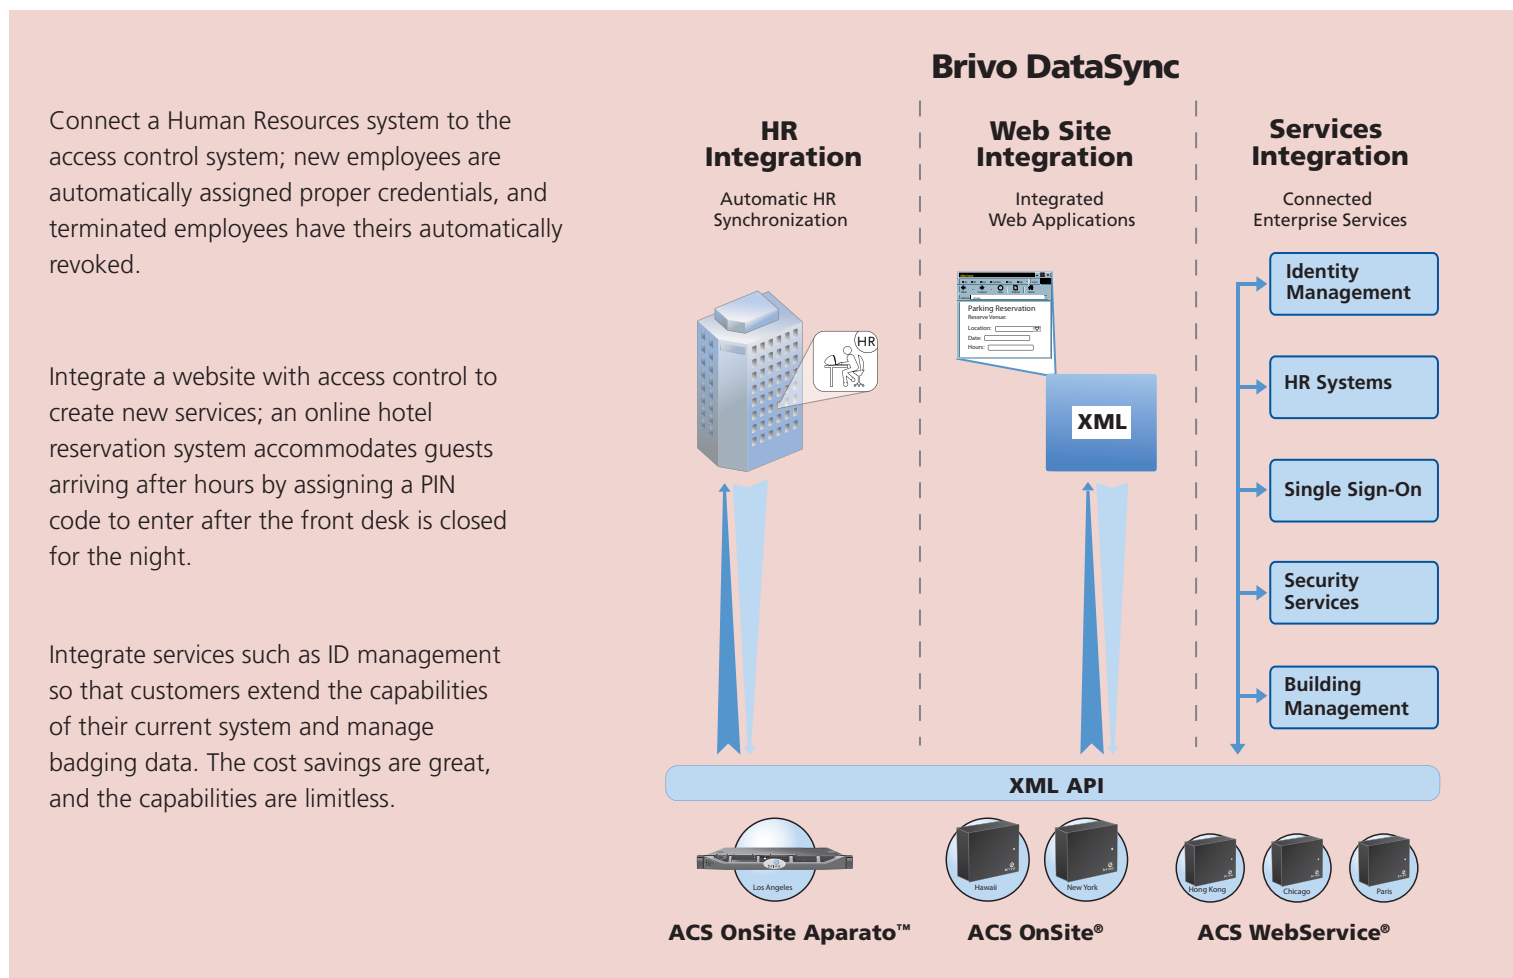

IP access control has potential yet to be realized. The convergence story is much more than one of being able to manage your access control system over the Internet. It's now possible to leverage existing access systems by connecting them to other enterprise systems and to the vast information services available across the Internet.

Integration enables access control, device management, and other systems to "listen" and respond to data such as weather conditions, public service announcements, and much more. Accessing data in this manner allows

municipalities, schools, and businesses to address and respond to changing conditions.

Brivo Makes It Possible.

Brivo's DataSync enables the transfer of information between systems. DataSync uses Brivo's open XML Application Programming Interface (API) to exchange data in the XML standard so that diverse systems can "understand" one another.

Brivo DataSync

Creating Solutions Through Integration

Brivo DataSync is available to authorized Brivo dealers, end-users, and partners, and is available for ACS WebService®, ACS OnSite Aparato™ systems, and ACS OnSite®. To facilitate development and quality assurance, customers may choose to purchase an ACS OnSite control panel for more ambitious integration projects. To get started with Brivo's DataSync, contact your Brivo Sales Representative, call us toll-free at 1-866-692-7486, option 1, or email us at demo@brivo.com.

Brivo's DataSync allows administrators' different systems to exchange data in the XML standard so they can "understand" one another.

Powerful security made simple.
