

Brivo ACS WebService™

Multiple Sites and
Difficult Configurations

Two Key Benefits to Web-hosted Access Control

- Managing Multiple Sites
 - Little IT support required – No LANS or WANs
 - Multiple administrators
 - No software to load or licenses for those administrators
 - Easy interface to train on
 - Accessibility from any PC
 - Ability to Partition Administrators to limit them to local sites other to all sites
- Overcoming difficult wiring conditions
 - ACS5000E requires a standard network drop and secure outbound access to the Internet
 - No Ethernet/No Problem - Go Cellular
 - All panels report back under customers account as a site
 - Mix & Match panel types
 - No limit to the number of sites

Multi-site configurations - Past

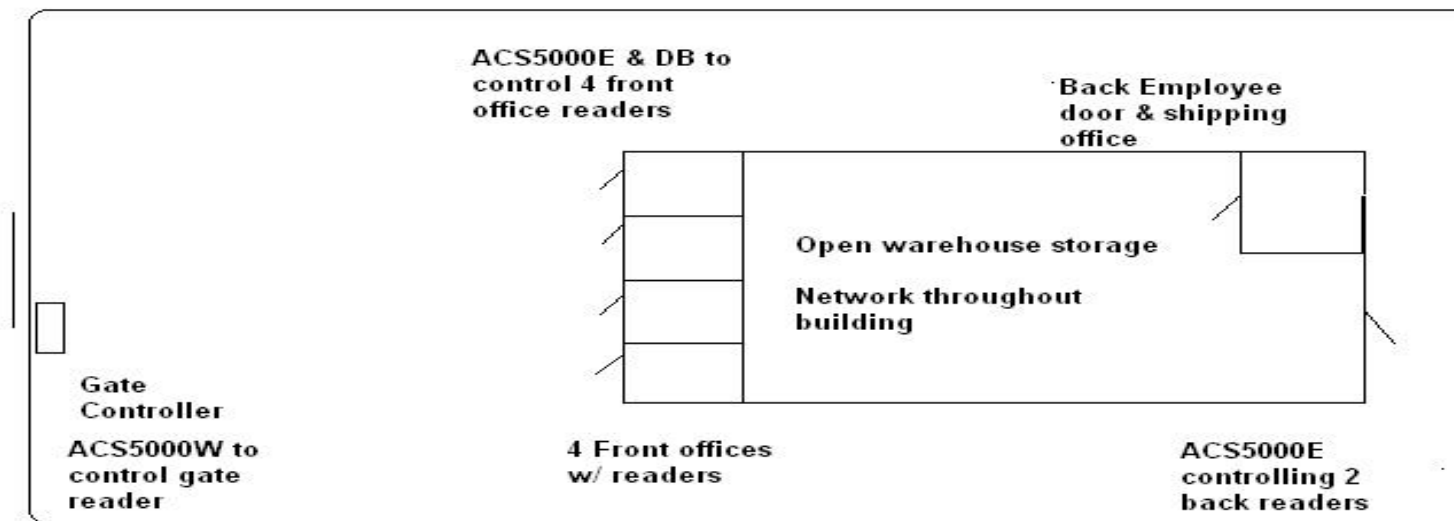

- Access control systems have traditionally had the following characteristics which add cost, time, and complexity to a project:
 - Dedicated servers and software
 - Software licenses for multiple administrators
 - Multiple sites required network engineering
 - Additional hardware required
 - LAN Converters
 - Phone lines w/ modems
 - Much more project management and coordination required
 - Your technicians need to be network savvy
 - Server/software hassles and upgrade headaches
 - More IT involvement & time
 - Backups
 - Maintenance

ACS WebService and Multiple Sites

- ACS WebService makes it easy to install multiple sites
 - No Network/No Problem – Use the ACS5000-W cellular panel
 - All that's needed is a network drop within 50' of ACS5000-E
 - 110/115VAC required
 - 2 or more bars of cellular coverage needed
 - All main panels report back to the servers over the Internet as sites
 - OK to mix and match panels depending upon what the customer can provide
 - Sites are attached to the customer's account
 - Using the existing broadband Internet
 - No LANs & WANs to interconnect buildings
 - No phone lines with modems
 - Customer manages their sites from a single logon
 - As many administrators as they want
 - From any PC with broadband Internet & a browser
 - Administrators can be limited to what they can see & do

Multi-site and difficult wiring example

Web-hosted Architecture

Key Features for Multi-site Customers

- Remote control from anywhere
- Central control of database
- Audit trail of database changes
- Administrator limits
- Email Notification
- Facility Lockdown
- DVR Integration

Why ACS WebService is the Best Choice

- Scalable – 1 site or 100s of sites
- Secure – All data is encrypted 128 bit SSL
- Network safe – Outbound communication only customer does NOT need to open their network to inbound communication
- Convenient – Customer Accesses their account from any PC with broadband Internet connection
- Flexible – Multiple site management from the same logon
- Less IT involvement - Using the customer's existing broadband Internet
 - Database backups & maintenance performed by Brivo
 - Disaster Recovery
 - Server Redundancy
- Training – Easy user interface
- Upgrades a thing of the past – Customer is ALWAYS on the latest & greatest
- Cost Savings – Total Cost of Ownership less than traditional access control
 - Be more competitive/Sell more
 - ACS WebService is a differentiator between you and your competitor

Target Vertical Markets

- Property management
- Municipalities/public works
- Warehousing/distribution
- Transportation/logistics
- Religious institutions
- Education – districts, universities, satellite campuses
- Manufacturing facilities
- Condos and gated communities
- Healthcare – hospitals, clinics, campuses
- Takeovers!
