Release Notes

ACS WebService® Release 10.5

Overview: This release provides features to improve overall usability and adds a new structured reporting capability.

My Reports

In this version we have dramatically improved the reporting engine within WebService by implementing a new reporting infrastructure. This infrastructure is the foundation for additional reporting improvements planned for future versions.

The Reports tab has been augmented with a link to My Reports, where you can configure and save “canned” reports. You can also create links to these reports which will appear on the home page. All existing custom reports under the User and Activity links will remain in their present location. In the future, it will be possible to create custom reports and manage them in My Reports.

My Reports allows you to generate two types of canned reports: immediate and scheduled. Scheduled reports can be automatically generated and emailed on a daily, weekly, or monthly basis. Report content is automatically filtered in accordance with an Administrator’s permissions.

Filtering, Jumping, and Pagination

To assist with searches and general navigation, we have implemented an enhanced filtering capability with the ability to perform a smart search on specific information. We have also added the alphabetic jump and pagination feature to appropriate tabs. The enhancements to each page are outlined below:

Users/Groups: Simple search has been replaced by smart search filter and Alpha Jump has been added. Cards: Smart search filter has been added. Sites/Doors: Smart search filter, Alpha Jump, and pagination have been added. Schedules: Smart search filter, Alpha Jump, and pagination have been added. The Schedule page has also been reorganized as a tabular list. Reports: Pagination has been added

Increase Door name Limit

It is now possible to create door names with as many as 100 characters.
