## Release Notes

### ACS WebService® Release 10.6.2

**Overview:** This release introduces two-sided badging on supported badge printers as well as adding email notifications for camera motion events.

#### **Two-sided Badge Printing**

This new feature allows for two-sided badge printing. The badge printer must have two-sided capability and operate using a 300 dpi CR80 format. Additionally, most badge printers must enable two-sided printing functionality to print two-sided badges. If not enabled, the printer may not print properly.

Specifically for our Magicard printer users, the badge printer **MUST** have the latest drivers from Magicard. Visit <http://www.ultramagicard.com/technical-support> to acquire these drivers.

#### **Email Notifications for Camera Motion Events**

This new feature adds camera motion events to the email notification menu, allowing designated recipients to get an email alert in case of any motion detected by the cameras on the system. To avoid overloading email servers, these camera motion event emails are limited to a maximum of five emails per fifteen minute period.
