

OVR WebService®: Easy as 1, 2, 3

See what's happening at your facilities—anytime, anywhere!

Powerful security made simple.

Adding video surveillance capabilities to your Brivo ACS WebService® system is simple with our Online Video Recorder (OVR). All you need is a compatible camera, a broadband connection, and a WebService account. After you enter information about the camera into ACS WebService, your camera will be automatically set up for video recording and live display. No servers, no software, no hassles. It's as easy as 1, 2, 3!

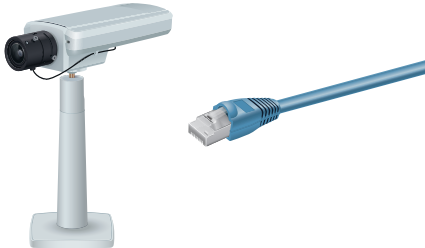

Step 1

Purchase an OVR-compatible camera from your Authorized Brivo Reseller.

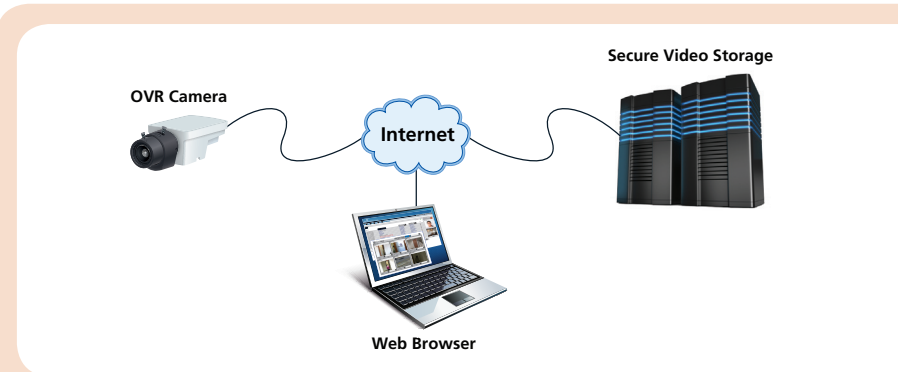

Step 2

Install the camera. Mount the camera and connect it to your network.

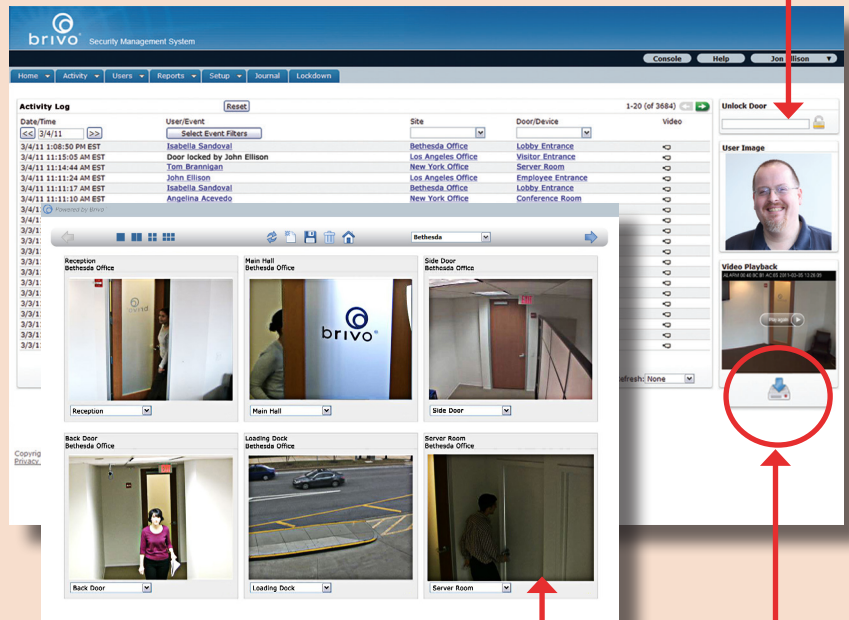

Step 3

Associate the camera with a door in your Brivo WebService Security Management System.

View recorded event video with stored User images.

Monitor live cameras and unlock doors for visitors.

Download video clips to save or email.

For full details on OVR WebService, contact your Authorized Brivo Reseller or call 1.866.692.7486, option 1. Access the OVR WebService datasheet by visiting www.brivo.com/products/ovr.
