

WHAT'S NEW IN BRIVO ACCESS: WINTER 2021

INTRODUCING NEW FEATURES FOR BRIVO ACCESS

Occupancy Tracking to Support the Return to Work

Many jurisdictions have occupancy limits and security and facility managers need an easy way to manage the occupancy requirements set by corporate policies and/or local government rules and an audit trail.

Introducing Occupancy Tracking for Brivo Access:

- Monitor the number of users at your sites in real-time
- Easily view users currently onsite
- Configure maximum occupancy for each of your locations

Empower Administrators and Enhance Security

Managing who has access to what, that the access is appropriate and that the user is in fact who they are supposed to be is important to securing access in the physical and cyber world.

Introducing granular permissions and enhanced multifactor authentication (MFA):

- Implement a least-privileged access policy for security
- Give administrators the exact permissions needed for their role
- Enable enhanced MFA for an additional layer of security to protect against unauthorized access to the platform
